

## CarolinaAramburoAndFriends' TOPIC OF THE WEEK

### Hello Health, Fun and Well-Being, Partners!

In this 235th Newsletter, I want to give us a chance to consider the impact that organic food has on our physical, mental, emotional and spiritual well-being.

In order to put the rest of the **news-letter in context**: This conversation makes more sense if you've watched my [1st Health Proposal](#) and my [2nd Health Proposal](#). So if you haven't, please pause, go back and watch them. You can also read all of the articles in full [HERE](#).

### INDULGE IN THE SWEETNESS AND PURITY OF EVERYTHING ORGANIC!!!

Over time, we have learned that how foods are grown are just as important as which ones we decided to eat. In this newsletter, I want to focus on the perspective that food produced without using pesticides, fertilizers, radiation and so on, have a direct **positive impact on our health and well being**.

This week on our Fan Page, we have articles that will offer you information about organic foods and the claims that they will **make you look and feel better**. They cover the physical, mental, emotional, and spiritual effects that organic food has on your body.

Certified organic foods must come from farms and processing plants that are **certified** by the USDA's organic standards. That is why foods that are organically grown proudly advertise it on their label.

Keep in mind that while there are products that are **100% organic**, there are also products that are "organic" and "made with organic ingredients". Foods that are labeled organic will be at least **95% organic** and will bare no sulfites, or in other words, preservatives. On the other hand, foods that are labeled "made with organic ingredients" must be at least **70% organic**, and also have no sulfites added. Either way, the lack of harmful bacteria in organic foods reduces **serious illnesses** that could be contracted from non-organic foods. These illnesses include, but are not limited to: Alzheimer's disease, behavioral disorders, and birth defects that include premature births, obesity, and cancer.

While some studies have shown that the **minimal amounts of chemical pesticide residue** on non-organically grown foods are not dangerous, I prefer to not take the chances of introducing more foreign chemicals into my body. Throughout the last 30 years, there has been **evidence** that animals fed with organic feeds are healthier and that the benefits for the environment are better as well.

Different studies have shown that

CAROLINA ARAMBURO

organic produce has **between 30% and 300% higher nutritional concentrations**. This is said to be due to a better quality of soil and because their growth has not been artificially sped up. Non-organic foods also tend to contain more water and therefore less actual solid food content.

Eating a healthy diet will definitely **satisfy your taste buds** and it will also impact the mental, emotional, and spiritual aspects of your life. Studies have shown that by eating a healthier diet, you will in turn have better chances at more balanced emotions, display more mental clarity, and be able to concentrate and focus in life. Feeling better, **increased energy, and a stronger immune system** from organic (Cont. on next page)

## INDULGE IN THE SWEETNESS AND PURITY OF EVERYTHING ORGANIC!!!

foods will translate to more vitality and better efficiency and productivity in whatever you choose to do.

There is no need to add anything to the already **perfect** formula of the food we eat. My body reacts differently when I eat organic. Through listening to my body, I can immediately tell when ANY **chemicals** have entered into my body. Throughout the months, in which I was undergoing the MOST CRUCIAL part of my INTENSE HEALING Journey, my body became used to organic food and now **expects that I provide it** with nothing less and lets me know very CLEARLY when I am DISHONORING my body with LOW Quality NUTRIENTS (meaning not totally ORGANIC Food).

Thus I have learned to **cherish** my body by giving it the HIGHEST QUALITY of Organic food = LIVING Raw Whole Foods. Any small amount of chemicals will upset my own **Wellness BALANCE**, create problems with my ENERGY, stomach, liver as well as my kidneys, just to begin the **short term** effects.

When our bodies ARE NOT DETOXED enough, our MENTAL CLARITY and EMOTIONAL Ideal BALANCE is never as HIGH as they can BE (only when you do the Hippocrates Health Institute Diet for **over 3 months** you are ABLE to EXPERIENCE this HIGH WELLNESS difference, as I do) . Cherishing my body also allows me to cherish myself **spiritually**. My focus for meditation and my ability to clearly connect with the planet, people and Source depends on clean, non-chemical food.

I deserve a **pure vessel** to ENJOY LIFE through and I make sure I create that in many ways INCLUDING by eating only **100% organic foods**. As I found, no matter how much you wash or soak non-organic produce, you will still be consuming, **at minimum**, some chemicals. Even a simple apple can have over 20 different kinds of pesticides on it.

For **mothers-to-be**, there is a real reason to go organic above and beyond their own health. Recently, there were 3 new studies published stating that **prenatal exposure** to organophosphate (OP) pesticides used on non-organic food are linked to IQ deficits. Pesticides are proven, in these studies, to be harmful to the developing brain, especially before birth.

Please be aware that just because the label reads organic, it does not mean that it **guarantees** good health. Eating organic is simply one piece of the puzzle. Organic sweets still contain sugar and organic butter still **contributes to clogging** your arteries. So you must still BE WISE and Mindful about what organic foods to eat.

Eating for my best health has become a **passion** of mine. It is a journey that I would love for you to join me on. The change to organic within your diet can contribute to the **enormous results** that I want you to have.

Cherish your body and listen to what it **really** NEEDS (not wants out of addictive habits like processed Sugar). If you **pay attention**, I bet it will tell you loud and clear: "Eat organic, PLEASE!"

To ENHANCE, elevate and EVOLVE your wellness I have two very important **recommendations** for you:

- 1) Listen to your body in a specific way\*.
- 2) Find an extraordinary **Holistic Health/ Wellness Coach**.

\*In my second health proposal, I proposed that you can improve your health by **listening** to your body and becoming aware of what it needs. I don't mean listening to your body's cravings, mostly just out of habit.

There is a **specific** way that this needs to be done and to learn 'HOW' please watch my video by clicking **HERE**.

My 2nd recommendation is that you find an **extraordinary** Holistic Health/ Wellness Coach. In our Radical Results WELLNESS COACHING DIVISION we are ready to create **Top Wellness**, with and for YOU, by designing completely **customized** nutritional, exercise plans that work for your unique body!

If you would like to **find out more** about coaching with our Health, Fitness & Quantum Healing Division click here:

[www.CarolinaAramburo.com](http://www.CarolinaAramburo.com).

By listening to my body, and being a Wellness Coaching Client of my own Company I was able to EVOLVE my Health and Wellness in a way that I **never imagined possible!**

## UNVEIL THE INTOXI-LICIOUS BENEFITS OF ALL NATURAL ENERGY!!!

Organic food is becoming more and more popular every day. People are beginning to care more about their health and what they eat! The big question that many people are inquiring is: **what is organic food and how does it differ** from the food that we are already eating?

USDA describes organic food as products that do not come from animals that are given antibiotics or growth hormones and planet based food that is produced **without using most conventional pesticides or fertilizers** which are made with synthetic ingredients or sewage sludge, bioengineering or ionizing (Cont. on next page) radiation.

The USDA also claims that organic food does not ensure food quality. On the other hand, proponents stated that organic foods are **richer in nutrients** than non-organic foods. Charles Benbrook, a chief scientist at the Organic Center in Oregon, found that organic food tends to have higher levels of antioxidants, Vitamin C and trace minerals. Consuming more organic food is **not the only way to improve your nutrient intake**, but it may be the safest.

It was reported by the French Agency for Food Safety (AFSSA) that organic foods are better for human health and contain less pesticides and nitrates, which are **linked to many diseases** including diabetes and Alzheimer's.

Organic food benefits reported by AFSSA:

- Organic plant products are more **nutrient dense**.
- They have a higher level of **minerals**.
- They contain **more antioxidants** such as phenols and salicylic acid, which protect

against cancer, heart disease and many other health problems.

- 94–100% of organic foods do not contain any **pesticide residues**.
- Organic cereals contain similar levels of **mycotoxins** as conventional ones.
- Organic food may also help **weight control** by meeting your body's nutritional needs. In turn, it will make you no longer feel hungry and will stop you from eating and craving junk foods.
- Organic food also improves your physical state by making you feel better, **increasing your energy, and providing you with a stronger immune system**. These translate to a higher chance of reaching success.

Apart from having a great effect on your health and how organic food improves your nutrient intake, we can also relate it to non-obvious benefits such as:

- **Better taste**: People believe that organic food has a better taste than non-organic food because it is produced using organic means. Organic food is often sold locally. Therefore, the food will be sold fresh in the markets.
- **Environmental safety**: As a result of organic food being produced without chemicals, there is very low pollution of the soil, air and water, ensuring the planet for future generations.

Many organic food consumers complain about its price and how organic food is more expensive than non-organic food. The reason for that is because organic **farming practices cost more** than conventional farming methods. The government regulations

required for organic certification, including certification costs, labor hours and shipping prices, lead to the high costs as well. I personally **consider the cost of organic food as insurance for my body**. Organic food has become an instinctual choice for me. I have realized the benefits it has provided for my body and you can enjoy the many benefits of organic foods too!

The food we eat impacts us on a physical, mental, emotional and spiritual level. The first health proposal is about cherishing our body and the second one is about **listening** to it. In the second health proposal, I propose that we can notice and **be aware of** what our body needs and wants. In my health journey and now, I listened to my body to connect with the **gratifying and positive energy of organic food**. I totally indulge in the food I eat and the incredible peace and clarity it gives me.

**Listen to your body** to tell you how to use natural organic foods to support you physically, mentally, emotionally and spiritually. You can notice **exuberant changes** in the power of your mind, your physical health, your ability to connect with Source/God/the Universe, and your emotions. I invite you to go on this **enchanting journey** with me!

If you would, please go to this link and give us/me your feedback:

That will make a major difference for me/us. We are not selling you anything. The commitment is **giving and receiving of information** and we appreciate your contribution. Thank you so much for the opportunity to learn together.

## SIMPLE SPIRITUALITY & SUSTAINABILITY

I have created a Facebook Fan Page with these intentions:

1. To express three passions of mine that I have ironically been suppressing since 1999:
  - my passion for spirituality.
  - my passion for our earth/environment/plants/animals and the future of them/us all.
  - my passion for uniting all religions, spiritual expressions without excluding any of them and without relating to one as better than the other.....
2. To create a space where my friends and I can enrich each other's spiritual growth and we can all together empower our community

(and our world) in their/our spiritual growth.

3. To have us all support each other and the world in learning to live sustainable lives and learning to "heal" the world in a "green way".
4. To answer my lifelong "calling". A calling to: team up with leaders in our community/world and together lead the way towards a Self-Realized Civilization, creating/waking up to a NEW GLOBAL VISION and maybe even questioning all our belief systems.
5. To make it all simple and synergistic.

## SURRENDER TO THE CRAVING OF YOUR MENTAL, EMOTIONAL, AND SPIRITUAL HEALTH!!!

Maintaining a healthy diet goes beyond having mere physical benefits. It also impacts you emotionally, spiritually and mentally. If you carry out a healthy diet you may notice that your emotions may become more balanced which will in turn increase the balance in your life.

Aside from the organic food farming methods not being harmful to the environment, choosing to eat organic, as opposed to non-organic, will forward you as well. When you know that you are doing the best for your body, your family, and the environment, you can then have the peace of mind that comes along with that.

Having a non-organic diet can have an adverse affect on your brain according to three US universities. The University of North Carolina, UC Berkeley and Columbia University did three separate studies on how pesticides (dialkyl phosphate and chlorpyrifos) used in the growth of food influences how the brain develops during childhood and at the adult age.

These studies revealed that pesticides do in fact impact the brain and showed that pesticides can have a large effect on unborn babies. Although these findings were related to prenatal exposure to pesticides, they also have a negative impact on the brain function as well as mental health of anyone exposed.

Exposure to organophosphate (OP) pesticides have been said to be linked to IQ deficits in school-aged children, but we are continuously exposed to OP pesticides because they are being used widely on the fruit and vegetable crops here in the United States. Additional studies have shown the link between exposure to pesticides and the effect it has on a person's mental stability. These studies have proven that exposure to pesticides has actually caused depression amongst some individuals.

Please take care of your body and cherish it, whether you are thinking about the well-being of
